Remote Desktop Using a Remote Desktop Gateway Instructions

This is a step-by-step guide on connecting to your office desktop computer with Remote Desktop utilizing a Remote Desktop Gateway. Using an RD Gateway means that you don’t have to establish a VPN connection at all. This can be done from any system (including Apples, I believe).

Click Start -> All Programs -> Accessories -> Remote Desktop

Click Option to expand the available options so that the window looks like this...

Input the fully qualified domain name of your desktop computer (Note - username.walton.uark.edu) and your username in the format gacl/username.
Click the Advanced tab
Now click Settings...
Select **Use these TS Gateway server settings**: and input ts-waltongw.waltoncollege.uark.edu for the Server name:

Click OK.

Now click Connect.
